

## Press Release

August 21, 2018, Rochester, New York – CEIPAL Corp., a leading company that provides a fully integrated Software as a Service (SaaS) platform for Recruitment and Workforce Management, announced today that it has **achieved Service Organization Control (SOC) 2 Type II compliance**, an attestation standard defined by the Association of International Certified Professional Accountants (AICPA).

After a rigorous assessment, the SOC 2 Type II attestation report was issued by a nationally ranked, Top 40 CPA firm, and confirms that CEIPAL has met the standards established by the AICPA.

The firm tested the design and operational effectiveness of controls, and the results of the testing reinforce CEIPAL's commitment to security standards.

CEIPAL's cloud-based solutions are founded on trust-based services to its customers, and by reviewing the results of this attestation, clients can be reassured of their reliance on CEIPAL's controls in addition to the wide-ranging functionality that their products offer.

"As we all face increasing challenges and liability for protecting our valued customers' data, we need to show potential and existing customers that their supplier takes thorough, multi-layered security controls and processes seriously and prioritizes data protection," said Sameer Penakalapati, founder-member of CEIPAL.

Obtaining this credential sends a message to our current and future customers that they can be assured that maintaining secure customer data is extremely important to us as we help protect sensitive financial, classified, or personally identifiable information.
